

## Working with GMM

Before working with GMM, your “verksamhet” must be reported 45 days before the start to the Swedish Work Environment Authority (Arbetsmiljöverket).

UBI has permission to use GMM BSL-1 and BSL-2 in labs registered at the Swedish Work Environment Agency.

Ubi has the overall responsibility for the GMM facilities L-verksamhet and F-verksamhet. But all projects and company involving the management of biological material must be assigned a correct risk class and all work must be risk assessed before the work is carried out. Read more [here](#)

GMM activities are divided into three different levels of protection based on the risk posed by the uses included in the activities and thus the protective measures that must be taken. Biological infectious agents can usually be divided into four different risk classes.

- F-activities (negligible risk), infectious agents of risk class 1.
- L-activities (low risk), infectious agents of risk class 2.
- R-activities (moderate or high risk), infectious agents of risk class 3-4. **R- operations are not allowed to be used on the premises of UBI**

Risk assessment – contact Christin Grundström at UBI for more info.

### GMM application for F-verksamhet (BSL-1)

Registration of new GMM (F-verksamhet).

Form for [Notification of new GMM use \(F-verksamhet\)](#)

- F-verksamhet id-nr: REK 2012/45824 (556541-2946 v1)
- Room number: B8, B10C, B10D, B12, B17 and B22

### GMM application for L-verksamhet (BSL-2)

Registration of new GMM (L-verksamhet) in an existing L-verksamhet.

Form for [Notification of new GMM use \(L-verksamhet\)](#)

- L-verksamhet id-nr: REK 2013/3803 (556541-2946 v2)
- Responsible person for your GMM application is you not UBI
- Room number: B8, B12 and the passage between B8 and B12.
